

Report on Monsoon Season

“For after all the best thing one can do when it’s raining is to let it rain.”

- Henry Wadsworth Longfellow

The monsoon season is one of the most beautiful seasons of the year. It brings cool weather, dark clouds, and much-needed rain after the hot summer months. During this season, children explored how rain helps people, plants, and animals while also learning about the changes that take place in nature and in our surroundings.

This was done throughout the month of July. Each day a bite size information was given to children to comprehend the concept. The approach to the presentation was role-play method, where teacher was giving the narration and children did the enactment with dialogs. Lots of visual stimulation was given through the props that children got ready from home and school.

Our first presentation focused on **"How is Rain Caused?"** Children were introduced to the water cycle in a simple and engaging way. They learned that the sun heats water from rivers, lakes, and

oceans, causing it to evaporate. This water vapour rises into the sky, cools down, and forms clouds. When the clouds become heavy with water droplets, rain falls to the ground. The children were also introduced to **nimbus clouds**, which are dark, rain-bearing clouds responsible for bringing rainfall.

The presentation then highlighted the changes we notice during the monsoon season in our surroundings. Children observed that the school playground often becomes waterlogged, making it unsafe for outdoor play. They also noticed that trees, plants, and grass become greener and healthier after the rains, making nature look fresh and beautiful.

The children were shown some of the effects of heavy rainfall in cities. They learned that waterlogging can lead to traffic jams and provide breeding grounds for worms, insects, and mosquitoes that spread diseases such as dengue. They also discovered that during heavy rains, snakes may enter human habitats because their natural homes become flooded. Rather than harming these animals, children were encouraged to understand that snakes are also trying to stay safe. They learned that the best solution is to call trained snake rescuers, who carefully relocate the snakes back to their natural habitat without causing harm to people or wildlife.

The presentation also introduced children to what happens in hilly and mountainous regions during the monsoon season. Through a simple experiment, they understood the concept of a **cloudburst**, where a large amount of rain falls in a very short time. They also learned about mudslides and landslides, which can damage roads, homes, and forests. Children saw how overflowing rivers can affect villages, and how people and their livestock are safely evacuated to protect their lives during such natural disasters.

The session concluded with simple and practical safety measures to follow during the rainy season. Children learned the importance of keeping their surroundings clean to prevent mosquito breeding, using mosquito repellents and mosquito patches, avoiding

stagnant water, and staying dry to remain healthy during the monsoon.

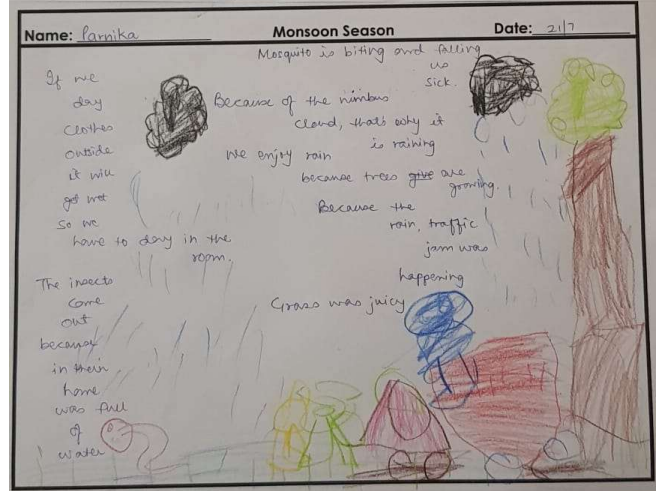

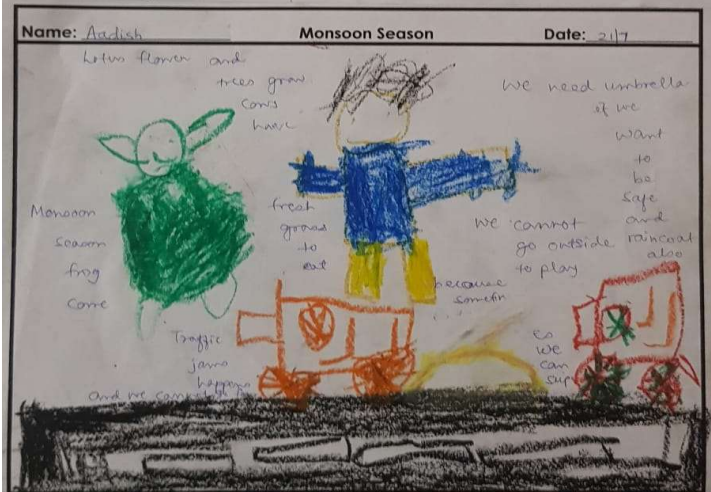

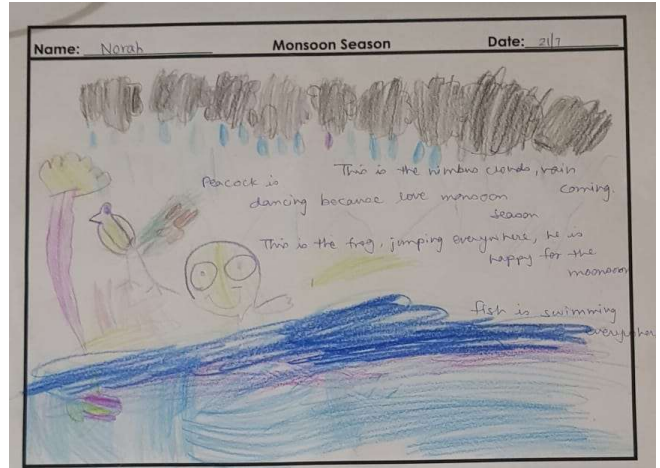

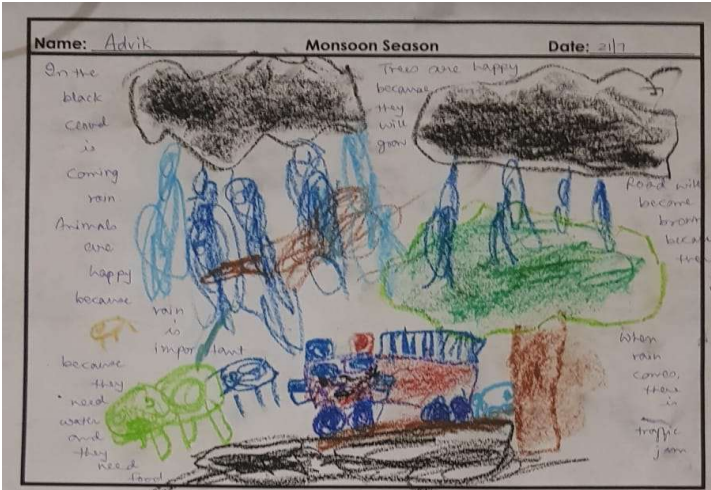

After the presentation, the children enthusiastically expressed their understanding through drawings and illustrations. Their artwork beautifully reflected their learning about the water cycle, rain clouds, nature, safety, and the various changes that occur during the monsoon season. This activity encouraged observation, creativity, and meaningful conversations about caring for ourselves, others, and the environment.

Myna's and Sparrow's also understood the concept at their level, where they were showcased about how clouds are formed and how rain falls, clothes or garments uses to protect from rain or getting wet and how to keep safe during this season.

As we conclude, we warmly welcome you to view the photo gallery given below and celebrate these special moments with us. We hope these photographs provide you with a glimpse of children's joyful learning journey and the meaningful experiences shared in school.
